

TyPac Stamp Rewinder

Engineered with the operator in mind, the TyPac Stamp Rewinder will rewind a 10" diameter roll in under 2 minutes. Coming in both a table top configuration and with a optional adjustable height rolling stand it is easy to use as well as store. A photo sensor detects when the roll has finished and will automatically stop the machine when done. As a safety feature the speed control knob must be turned to the off position before being turned back up for subsequent rolls to avoid the risk of accidental start up. The adjustable brake allows for operator controlled tension on your rolls. All of these features together provide a better operator experience with a lower reroll time than is found on many other machines.

- Power: 120v 2Amp
- Dimension: 34"x14"x12"(37"-47"*)
- Adjustable Brake
- Variable Speed
- Heavy Duty Chain Drive
- 24V DC Gear Motor
